

# STEALTH

## Ice Skate Sharpening Machine

Blackstone® Stealth Machines are perfect for a large volume shop and those who demand the absolute best. The angled tabletop and two finishing heads allow two operators to sharpen at once. With two finishing heads and a dedicated cross grind head, you can leave one head set up for player's skates and the other set up for goalie and figure skates saving you time and money. Stealth machines are only available with the Cyclone exhaust system. The dedicated cross grind makes shaping skates and removing rust quick and easy. Our Teflon infused table top ensures easy glide and a long service life. Comes ready to accept our Blackstone® Shaper system. Two (2) Professional Tri-Lie holders and four (4) Spinners of your choice are **included** in the purchase price.
